

## DIGITAL PHOTOGRAPHY – PE3201

Want to learn to shoot creatively, with your camera off the "automatic" setting? This course is an introduction to digital photography. It is aimed, primarily, for users of Digital Single-Lens Reflex (DSLR) cameras, but "point and shoot" users should get something out of the course too! Topic areas will cover lighting, composition, aperture, ISO, shutter speeds, depth of field, bokeh, dynamic range, and camera range. You DON'T have to know anything about photography to take the course. It will start at the very beginning: Photography 101.
